

Classic Plus-- Alternative Ball for 2010

USSSA has approved an alternative ball for play beginning on April 1, 2010—The Classic Plus. The Classic Plus Ball will be less temperature dependent than the Classic. As such, it will not harden as much in cold weather as traditional softballs and it will not soften as much in hot weather. In addition, because the COR of the Classic Plus may be higher than that of the Classic, stiff bats will benefit more than soft bats from the use of the Classic Plus. After April 1, 2010, the tournament or league Director of USSSA sanctioned events may choose, at their discretion, to use the Classic, the Classic Plus or both.
